Testing algorithm

For every paar of programs:
 - RX.c + TX.c
 - RX.c + TX.java
 - RX.java + TX.java
 - RX.java + TX.c
Try to send 100, 1000, 1000 UDP packets without delay between sends.
if there were packet loss, we tried to increase the delay to such a value that there would be no packet loss
For every conditions make 10 tests and measure average packet Loss (absolute and %)
